

AMENDMENTSIn the Claims

Please cancel claims 1, 3, 5, 6, 33, 36, 38, 40, and 41.

Please amend the following claims:

1. (Cancelled)

2. (Presently Amended) The method of claim 17, wherein configuring further includes configuring for communication with the first host in accordance with the first transmission method provided no response to a packet transmitted via the second transmission method is received.

3. (Cancelled)

4. (Presently Amended) The method of claim 37, wherein receiving further includes configuring for communication with the first host in accordance with the second transmission method provided a response to a packet transmitted via the second transmission method is received.

5. (Cancelled)

6. (Cancelled)

7. (Presently Amended) ~~The method of claim 6, wherein configuring further comprises~~ A method for automatically sensing a transmission method in a network, the method comprising:
transmitting at least one packet to a first host via a first transmission method;
receiving from the first host a response to the packet transmitted via the first transmission method;

transmitting at least one packet to the first host via a second transmission method;
receiving from the first host a response to the packet transmitted via the second
communication method,

wherein the response to the packet transmitted via the second communication method
comprises an address; and

configuring for communication with the first host using the address from the response in
accordance with the second transmission method, provided the response to the packet transmitted
via the second transmission method is received.

8. (Presently Amended) The method of claim 37, wherein no response to a packet transmitted via the second transmission method is received.

9. *(Presently Amended)* The method of claim 8, wherein configuring comprises configuring for communication with the first host in accordance with the first transmission method.

10. (Presently Amended) The method of claim 8, wherein the response to a packet transmitted via the first transmission method comprises an address.

11. (Original) The method of claim 10, wherein configuring further includes configuring for communication with the first host using the address from the response.

12. (Presently Amended) The method of claim 17, wherein a response to a packet transmitted via the second transmission method is received from the first host.

13. (Original) The method of claim 12, wherein the response comprises an address.

14. (Presently Amended) The method of claim 13, wherein configuring further comprises configuring for communication with the first host using the address from the response.

15. (Original) The method of claim 13, wherein no response is received to a packet transmitted via the first transmission method.
16. (Original) The method of claim 15, wherein configuring comprises configuring for communication in accordance with the second transmission method.
17. (Presently Amended) The method of claim 17, wherein no response is received to a packet transmitted via the first transmission method.
18. (Original) The method of claim 17, wherein configuring comprises configuring for communication with the first host in accordance with the first transmission method, provided a response to a packet transmitted via the first transmission method is received.
19. (Original) The method of claim 18, wherein no response is received to a packet transmitted via the second transmission method.
20. (Original) The method of claim 19, wherein configuring comprises configuring for communication with the first host in accordance with the first transmission method.
21. (Presently Amended) The method of claim 17, wherein the first transmission method is the unicast transmission method.
22. (Presently Amended) The method of claim 17, wherein the second transmission method is the multicast transmission method.
23. (Presently Amended) The method of claim 17, wherein transmitting at least one packet to a first host via a first transmission method further includes transmitting a predetermined number of packets to the first host via the first transmission method, until a successful response is received from the first host.

24. (Presently Amended) The method of claim 17, wherein transmitting at least one packet to a first host via a second transmission method further includes transmitting a predetermined number of packets to the first host via the second transmission method, until a successful response is received from the first host.

25. (Presently Amended) A method for automatically sensing a transmission method in a network comprising a plurality of hosts, the method comprising:

transmitting by a first host at least one packet to a second host via a first transmission method

receiving from the second host a response to the at least one packet transmitted via the first transmission method;

transmitting by a first host at least one packet to a second host via a second transmission method;

receiving from the second host a response to the at least one packet transmitted via the second communications method, wherein the response to the at least one packet comprises an address; and

configuring the first host for communication with the second host in accordance with the second transmission method using the address from the response from the second host, provided ~~a~~ the response to the packet transmitted via the second transmission method is received.

26. (Original) The method of claim 25, wherein configuring further includes configuring the first host for communication with the second host in accordance with the first transmission method provided no response to a packet transmitted via the second transmission method is received.

27. (Original) The method of claim 25, wherein no response is received to a packet transmitted via the first transmission method.

28. (Original) The method of claim 27, wherein no response is received to a packet transmitted via the second transmission method.

29. (Original) The method of claim 28, wherein configuring comprises configuring the first host for communication with the second host in accordance with the first transmission method.

30. (Original) The method of claim 28, wherein configuring further comprises configuring the first host for communication with the second host using an available address.

31. (Original) The method of claim 25, wherein the first transmission method is the unicast transmission method.

32. (Original) The method of claim 25, wherein the second transmission method is the multicast transmission method.

33. (Cancelled)

34. (Presently Amended) A method for automatically sensing a transmission method in a network comprising a plurality of hosts, the method comprising:
receiving, by a first host, a packet from a second host transmitted via a first transmission method;
transmitting by the first host at least one packet to the second host in accordance with a second transmission method;
configuring the first host for communication with the second host in accordance with the second transmission method, provided a response to a packet transmitted via the second transmission method is received; and ~~The method of claim 33, wherein configuring further includes~~

configuring the first host for communication with the second host in accordance with the first transmission method provided no response to a packet transmitted via the second transmission method is received.

35. (Presently Amended) A method for automatically sensing a transmission method in a network, the method comprising:

transmitting at least one first packet to the first host in accordance with a first transmission method;

receiving from the first host, a second packet transmitted via a second transmission method,

wherein the second packet received from the first host contains an address;

configuring for communication with the first host in accordance with the second transmission method using the address contained in the second packet received from the first host.

36. (Cancelled)

37. (Presently Amended) The computer readable medium of claim ~~36~~42, wherein configuring further includes configuring for communication with the first host in accordance with the first transmission method provided no response to a packet transmitted via the second transmission method is received.

38. (Cancelled)

39. (Presently Amended) The computer readable medium of claim ~~38~~42, wherein receiving further includes configuring for communication with the first host in accordance with the second transmission method provided a response to a packet transmitted via the second transmission method is received.

40. (Cancelled)

41. (Cancelled)
42. (Presently Amended) A computer readable medium containing instructions for automatically sensing a transmission method in a network, the method comprising:
transmitting at least one packet to a first host via a first transmission method;
receiving from the first host a response to the packet transmitted via the first transmission method;
transmitting at least one packet to the first host via a second transmission method;
receiving from the first host a response to the packet transmitted via the second transmission method, wherein the response comprises an address; and
configuring for communication with the first host in accordance with the second transmission method, provided a response to a packet transmitted via the second transmission method is received ~~The computer readable medium of claim 41, wherein configuring further comprises configuring for communication with the first host using the address from the response.~~
43. (Presently Amended) The computer readable medium of claim 38 ~~42~~, wherein no response to a packet transmitted via the second transmission method is received.
44. (Original) The computer readable medium of claim 43, wherein configuring comprises configuring for communication with the first host in accordance with the first transmission method.
45. (Original) The computer readable medium of claim 44, wherein the response to a packet transmitted via the first transmission method comprises an address.
46. (Original) The computer readable medium of claim 45, wherein configuring further includes configuring for communication with the first host using the address from the response.

47. (Presently Amended) The computer readable medium of claim ~~36~~ 42, wherein a response to a packet transmitted via the second transmission method is received from the first host.

48. (Original) The computer readable medium of claim 47, wherein the response comprises an address.

49. (Original) The computer readable medium of claim 48, wherein configuring further comprises configuring for communication with the first host using the address from the response.

50. (Original) The computer readable medium of claim 47, wherein no response to a packet transmitted via the first transmission method is received.

51. (Original) The computer readable medium of claim 50, wherein configuring comprises configuring for communication in accordance with the second transmission method.

52. (Presently Amended) The computer readable medium of claim ~~36~~ 42, wherein no response is received to a packet transmitted via the first transmission method.

53. (Original) The computer readable medium of claim 52, wherein configuring comprises configuring for communication with the first host in accordance with the first transmission method, provided a response to a packet transmitted via the first transmission method is received.

54. (Original) The computer readable medium of claim 52, wherein no response is received to a packet transmitted via the second transmission method.

55. (Original) The computer readable medium of claim 54, wherein configuring comprises configuring for communication with the first host in accordance with the first transmission method.

56. (Presently Amended) The computer readable medium of claim ~~36~~ 42, wherein the first transmission method is the unicast transmission method.

57. (Presently Amended) The computer readable medium of claim ~~36~~ 42, wherein the second transmission method is the multicast transmission method.

58. (Presently Amended) The computer readable medium of claim ~~36~~ 42, wherein transmitting at least one packet via a first transmission method, further includes transmitting a predetermined number of packets to a first host via a first transmission method, until a successful response is received from the first host.

59. (Presently Amended) The computer readable medium of claim ~~36~~ 42, wherein transmitting at least one packet to the first host via a second transmission method further includes transmitting a predetermined number of packets to the first host via the second transmission method, until a successful response is received from the first host.
